EXPERIENCE

Booking.com

Software Engineer

Amsterdam

May 2024 - present

- Saved over \$1M annualized by identifying and optimizing inefficient Spark jobs and Snowflake query patterns.
- Drove adoption of OpenTelemetry-based distributed tracing and metrics across the domain, improving platform reliability and incident response.
- Escalation point for cross-service failures during migration from Hadoop to Snowflake/Spark.
- Led a team of contractors, setting technical direction and prioritizing feature delivery and cost-reduction initiatives.
- Led development of a Python SDK (using uv/ruff/MyPy) for TB-scale data access using PySpark and Snowflake.
- Mentored junior engineer through delivery of a production system, emphasizing code quality and ownership.

Flexport

Software Engineer

Amsterdam

June 2023 - March 2024

- Designed and built Kotlin microservices with gRPC-based APIs for automated EU customs declarations.
- Built real-time shipment updates for Dutch ports via webhooks, eliminating manual polling and saving hours per broker weekly.
- Defined a Dockerized component testing approach adopted across multiple teams.

Picnic

Software Engineer

Amsterdam

January 2020 - June 2023

Data Engineer

June 2018 - January 2020

- Owned a FastAPI Python microservice distributing assortment data across the backend ecosystem, including stakeholder management. Initiated and led a service re-architecture to significantly improve SLA adherence.
- De-risked automated warehouse deployment by delivering a simulation platform enabling end-to-end system testing years before physical rollout.
- Improved operational reliability of a distributed warehouse control system through production contributions and on-call incident response (Spring Boot, PostgreSQL, SOAP, RabbitMQ).
- Enabled scalable product data processing by introducing an event-driven Python microservice architecture.
- Developed a Python module to stream data from backend systems and load it into a Data Vault model.
- Supported data-driven promotion decisions by maintaining a forecasting framework integrated with Salesforce.

Rewire (Micompany)

Working student (Data Engineer)

Amsterdam

August 2016 - December 2017

Worked on data engineering (Microsoft SQL Server) and backend web development (Python/Go).

Universiteit van Amsterdam

Teaching Assistant

Amsterdam

February 2017 - April 2017

EDUCATION

Universiteit van Amsterdam, Amsterdam

MSc, Computational Science

August 2015 - March 2018

University College Roosevelt, Middelburg

BSc, Liberal Arts & Sciences (Computer Science major)

August 2012 - June 2015

CORE SKILLS

- Languages: Java, Python, Kotlin, Rust, Ruby
- Data & Infrastructure: Spark, Snowflake, Kafka, RabbitMQ, PostgreSQL, MongoDB
- Platform & DevOps: Docker, Kubernetes, AWS
- Frameworks & APIs: Spring Boot, FastAPI, Ktor, REST APIs, Webhooks
- Native proficiency in Dutch, bilingual proficiency in English, basic proficiency in German
